St. Johns County Preparing for Possible Tropical Storm Impacts

St. Johns County, FL – St. Johns County Administration and Emergency Management remain in contact with the National Weather Service and National Hurricane Center while continuing to monitor the progress and potential track of Hurricane Isaias. An 8 a.m. conference call on Saturday, August 1, with the National Weather Service indicated that the storm has slowed and is taking a slightly more western track. St. Johns County is currently under a Tropical Storm Warning and a Storm Surge Watch. The community is advised to prepare for potential tropical storm impacts as early as 8 a.m., Sunday, August 2.

While the projected impacts do not currently warrant an evacuation or the opening of shelters, the community is projected to experience high winds and high water in low-lying locations and areas that are particularly vulnerable and prone to flooding. In addition, the potential for tornadoes also exists with the arrival of Hurricane Isaias. It is recommended that St. Johns County residents and businesses take all necessary precautions and expedite the preparation of homes and structures, as necessary.

St. Johns County will release updates as new information is made available. Residents may find local Hurricane Isaias information on the County's website at www.sjcfll.us/HurricaneIsaias. Weather updates related to Hurricane Isaias may be found at www.weather.gov/jax or www.nhc.noaa.gov. For additional information, please call the St. Johns County Emergency Operations Center Hotline at 904.824.5550.
