

The Google Chrome and Microsoft Edge web browsers have changed their default settings regarding support for FTP URLs resulting in not being able to see the GIS maps.

To correct this, open your Google Chrome web browser and type **chrome://flags** in the address bar and hit Enter. (Microsoft Edge web browser type **edge://flags**).

Next, type **ftp** in the Search flags box.

Click the drop-down menu and select **Enabled**.

Click **Relaunch** for the change to take effect in the browser.

After making this change you should be able to download and view the GIS maps.
